What education can I list on CPDmatch?

You can list the following types of education whether these are in the future (scheduled), or they've already taken place (a recording or other resource which can be viewed or accessed on demand):

- Courses
- Conferences
- Webinars
- Study days

You can also list peer-reviewed articles, slide presentations and other relevant publications. If your education is short in duration, we recommend grouping several bite-size resources onto a single webpage.

The content of your education must align to one or more of the following:

- The triple planetary crisis of **climate change, pollution and loss of biodiversity.**
- The threat to people from **food insecurity, infectious diseases, heat, extreme weather** and other climate and environmental health impacts.
- **Clinical pressures** and how healthcare systems can mitigate risk, adapt and design solutions.
- Knowledge to help healthcare professionals **keep themselves and their families physically and mentally healthy** and to **develop as leaders, educators and communicators**.
- Global challenges and why we must extend the ethos of **first, do no harm** from the individual patient to the planet considering all those affected by our decisions and actions.
- **Research and innovation** which focuses on keeping all businesses in the healthcare value chain environmentally, socially and financially sustainable.

Recognising the challenges faced by the Global South, the CPDmatch team prioritises the listing of free and virtual education to ensure maximum accessibility.

All education must link to one or more of our 12 top-level categories:

- Climate change
- Clinical impacts and solutions
- Developing self and supporting others
- Food, nutrition and fresh water
- Infectious diseases
- Innovation including research
- Mental health, the mind and behaviour
- Nature and the biosphere
- Pollution, environmental and human health
- Public and global health
- Staying healthy and caring at home
- Sustainable business and solutions

To help site visitors find the most relevant education, top-level categories are sub-divided. We recommend selecting the fewest number of categories which most accurately reflect your education to enhance matching accuracy.
